Paper 4 Specialist Options: Application

**October/November 2019**

MARK SCHEME

Maximum Mark: 60

---

**Published**

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge International will not enter into discussions about these mark schemes.

Cambridge International is publishing the mark schemes for the October/November 2019 series for most Cambridge IGCSE™, Cambridge International A and AS Level components and some Cambridge O Level components.

**TestDaily**

有干货，有陪伴，有进步

---

This document consists of **21** printed pages.

**Generic Marking Principles**

These general marking principles must be applied by all examiners when marking candidate answers. They should be applied alongside the specific content of the mark scheme or generic level descriptors for a question. Each question paper and mark scheme will also comply with these marking principles.

**GENERIC MARKING PRINCIPLE 1:**

Marks must be awarded in line with:

- the specific content of the mark scheme or the generic level descriptors for the question
- the specific skills defined in the mark scheme or in the generic level descriptors for the question
- the standard of response required by a candidate as exemplified by the standardisation scripts.

**GENERIC MARKING PRINCIPLE 2:**

Marks awarded are always **whole marks** (not half marks, or other fractions).

**GENERIC MARKING PRINCIPLE 3:**

Marks must be awarded **positively**:

- marks are awarded for correct/valid answers, as defined in the mark scheme. However, credit is given for valid answers which go beyond the scope of the syllabus and mark scheme, referring to your Team Leader as appropriate
- marks are awarded when candidates clearly demonstrate what they know and can do
- marks are not deducted for errors
- marks are not deducted for omissions
- answers should only be judged on the quality of spelling, punctuation and grammar when these features are specifically assessed by the question as indicated by the mark scheme. The meaning, however, should be unambiguous.

**GENERIC MARKING PRINCIPLE 4:**

Rules must be applied consistently e.g. in situations where candidates have not followed instructions or in the application of generic level descriptors.

**GENERIC MARKING PRINCIPLE 5:**

Marks should be awarded using the full range of marks defined in the mark scheme for the question (however; the use of the full mark range may be limited according to the quality of the candidate responses seen).

**GENERIC MARKING PRINCIPLE 6:**

Marks awarded are based solely on the requirements as defined in the mark scheme. Marks should not be awarded with grade thresholds or grade descriptors in mind.

**Each option has three questions:**

**Section A: (stimulus) Answer two questions from choice of four: (a)=2, (b)=4, (c)=4 & (d)=5 [15 total]**

Section A: candidates answer two questions from a choice of four, based on the two specialist options they have studied. Each question is based on stimulus material and is divided into four parts. There are 2 marks for part (a), 4 marks for part (b), 4 marks for part (c) and 5 marks for part (d).

**Section B: (design) Answer one question from choice of four: (a) = 10 marks, (b) = 8 marks [18 total]**

Section B: candidates answer one design-based question from a choice of four, based on either of the two specialist options they have studied. The question is divided into two parts. There are 10 marks for part (a) and 8 marks for part (b).

**Section C: (essay) Answer one question from choice of four: 12 marks.**

Section C: candidates answer one essay question from a choice of four, based on either of the two specialist options they have studied. There are 12 marks for this question.

Questions will require candidates to consider approaches, research methods and issues and debates. The questions will be based on two topic areas (a, b, c, d, e) covered within the chosen specialist option. The two topic areas for each specialist option will be different to the two topic areas assessed in Paper 3.

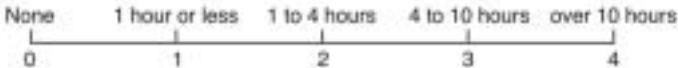

*In order to achieve the same standard across all questions in a Section, the same generic mark schemes are used for each option. These mark schemes are as follows.*

<b>Section A: Stimulus (Generic response descriptor)</b>		
(a)	0–2	<b>1 mark</b> for basic answer e.g. identification. <b>1 mark</b> for elaboration/example.
(b)	0–4	Question always requires two ‘things’ <b>1 mark</b> basic answer. <b>2 marks</b> elaboration. Max 2 marks if only ‘one’ is answered.
(c)	0–4	Questions require either one or two ‘things’ <b>If two: 1 mark</b> basic answer. <b>2 marks</b> elaboration. <b>If one: 1–2 marks</b> basic answer. <b>3–4 marks</b> detailed answer/elaboration. If two required and only one provided, max 2 marks.
(d)	0–5	Question requires <b>discussion</b> . Question always <b>plural</b> of each argument. Question always requires conclusion. <b>1 mark</b> for each for/against argument (however detailed) up to 4 max. <b>1 mark</b> for conclusion. <b>Note:</b> If three (or more) arguments for one side, best two credited. If one side only, max 2 marks.
0	0	No response worthy of credit.

<b>Section C: Essay/Evaluate (Generic response descriptor)</b>		
Level	Marks	Level Descriptor
4	10–12	<ul style="list-style-type: none"> <li>• <b>Both sides</b> of the argument are considered and are relevant to the question.</li> <li>• <b>Appropriate examples</b> are included which fully support both sides.</li> <li>• Discussion is <b>detailed</b> with <b>good understanding</b> and clear expression.</li> <li>• A conclusion is drawn with appropriate justification.</li> </ul>
3	7–9	<ul style="list-style-type: none"> <li>• <b>Both sides</b> of the argument are considered and are relevant to the question. They may be <b>imbalanced</b> in terms of quality or quantity.</li> <li>• <b>Some examples</b> are included, are appropriate and often support both sides.</li> <li>• The answer shows good discussion with reasonable understanding.</li> <li>• A basic conclusion is drawn with little or no justification</li> </ul>
2	4–6	<ul style="list-style-type: none"> <li>• Reasons are limited to <b>one side</b> of the argument.</li> <li>• <b>Limited</b> reference to <b>examples</b>, or <b>lack of detail</b>.</li> <li>• The answer shows <b>some understanding</b>.</li> <li>• There may be no conclusion.</li> </ul>
1	1–3	<ul style="list-style-type: none"> <li>• Anecdotal discussion, <b>brief detail</b>, minimal relevance. Very <b>limited range</b>.</li> <li>• Discussion may be <b>inaccurate</b> or incomplete.</li> <li>• May evaluate topic area studies, making only indirect reference to the question.</li> </ul>
0	0	<ul style="list-style-type: none"> <li>• No response worthy of credit.</li> </ul>

<b>Section B: Design a study question part (a) (Generic response descriptor)</b>		
<b>Level</b>	<b>Marks</b>	<b>Level Descriptor</b>
4	9–10	<ul style="list-style-type: none"> <li>The design is appropriate to the named investigation and is based on thorough psychological knowledge.</li> <li>The design is accurate, coherent and detailed, and it tests the proposed investigation competently.</li> <li>Four or five design features are included. The features are clearly applied to the design throughout the answer and the candidate clearly understands the main features involved in designing an investigation.</li> <li>The response has proposed an appropriate design, has applied a range of relevant methodological design features with competence and shown clear understanding.</li> </ul>
3	7–8	<ul style="list-style-type: none"> <li>The design is appropriate to the named investigation and is based on good psychological knowledge.</li> <li>The design is accurate, coherent and detailed, and it tests the proposed investigation competently.</li> <li>Two or three design features are included. The features are applied to the design, are detailed and the candidate shows good understanding in places.</li> <li>The response has proposed an appropriate design, has applied some relevant methodological design features and has shown good understanding.</li> </ul>
2	4–6	<ul style="list-style-type: none"> <li>The design is mostly appropriate to the named investigation and is based on psychological knowledge.</li> <li>Two or three design features are included. The features are often applied to the design with some detail and the candidate shows good understanding in places.</li> <li>The design is mostly accurate, coherent and detailed in places and it tests the proposed investigation.</li> <li>Design features are limited in their understanding.</li> </ul>
1	1–3	<ul style="list-style-type: none"> <li>The design may not be appropriate to the named investigation and use of terminology is sparse or absent. Basic psychological understanding is shown.</li> <li>The design lacks coherence and is limited in understanding.</li> <li>One or two appropriate design features are identified but incorrectly applied.</li> <li>The response lacks detail.</li> </ul>
0	0	<ul style="list-style-type: none"> <li>No response worthy of credit. The candidate describes the study listed on the syllabus.</li> </ul>

<b>Section B: Explain a study question part (b) (Generic response descriptor)</b>		
<b>Level</b>	<b>Marks</b>	<b>Level Descriptor</b>
3	6–8	<ul style="list-style-type: none"> <li>• Quality and depth of explanation is thorough.</li> <li>• Description of knowledge is accurate, coherent and detailed.</li> <li>• Use of terms is accurate and use of psychological terminology is comprehensive.</li> <li>• Understanding of methodology (such as elaboration, use of example, quality of description) is very good.</li> <li>• The design is effectively explained in relation to the topic area.</li> <li>• There is a balance of methodology and topic area/relevant study knowledge.</li> </ul>
2	4–5	<ul style="list-style-type: none"> <li>• Quality of explanation and depth of explanation is competent.</li> <li>• Description of knowledge is mainly accurate, coherent and reasonably detailed.</li> <li>• Use of terms is mainly accurate and use of psychological terminology is competent.</li> <li>• Understanding of methodology (such as elaboration, use of example, quality of description) is good.</li> <li>• The design is adequately explained in relation to the topic area (knowledge related to design)</li> <li>• There is an imbalance of methodology and topic area/relevant study knowledge.</li> <li>• Max 5 marks if only methodological or psychological decisions.</li> </ul>
1	1–3	<ul style="list-style-type: none"> <li>• Quality of explanation and depth of explanation is basic.</li> <li>• Description of knowledge is often accurate, generally coherent, but lacks detail.</li> <li>• Use of terms is basic and use of psychological terminology is adequate.</li> <li>• Understanding of methodology (such as elaboration, use of example, quality of description) is limited.</li> <li>• The design is poorly explained in relation to the topic area (knowledge not related to design)</li> <li>• There is an imbalance of methodology and topic area/relevant study knowledge.</li> </ul>
0	0	<ul style="list-style-type: none"> <li>• No response worthy of credit. The candidate describes the study listed on the syllabus.</li> </ul>

Question	Answer	Marks
<b>Section A: Psychology and abnormality</b>		
1	<p><b>A question from the Kleptomania Symptom Assessment Scale (K-SAS): During the past WEEK, approximately how many hours (add up hours) did you spend thinking about stealing? Please circle the appropriate number.</b></p> <p style="text-align: center;">  </p>	
1(a)	<p><b>Explain the characteristics of kleptomania.</b></p> <p><b>Most likely answer</b> (other appropriate responses to be credited):  <b>Note:</b> Question is characteristics (plural) so two different characteristics needed.</p> <ul style="list-style-type: none"> <li>• not being able to resist the urge to collect or hoard things</li> <li>• involves experiencing tension before the theft; feelings of pleasure, gratification, or relief when committing the theft</li> <li>• uncontrollable urge to steal (with example) = 1 mark</li> </ul> <p><b>Marks: 1 mark</b> for basic answer, e.g. identification. <b>1 mark</b> for elaboration/example.</p>	<b>2</b>
1(b)	<p><b>Suggest <u>two</u> possible limitations of answers participants may give to the question above.</b></p> <p><b>Most likely answer</b> (other appropriate responses to be credited):</p> <ul style="list-style-type: none"> <li>• the question is ambiguous; 1 and 4 hours appear twice so which should a participant choose?</li> <li>• what constitutes ‘thinking about stealing’? Vague thoughts or planning in detail something major?</li> </ul> <p><b>Note:</b> Answers which do not relate to ‘the question above’ 1 mark max however detailed.</p> <ul style="list-style-type: none"> <li>• participants may give socially desirable answers either to hide their symptoms (for assessment) or to show their therapy is working</li> <li>• only quantitative data/no in-depth answers.</li> </ul> <p><b>Marks: 1 mark</b> for basic answer. <b>1 mark</b> for elaboration/example. ×2</p>	<b>4</b>
1(c)(i)	<p><b>Suggest how the reliability of the K-SAS could be assessed.</b></p> <p><b>Most likely answer</b> (other appropriate responses to be credited):</p> <ul style="list-style-type: none"> <li>• reliability: use test-retest (1 mark) give the same test to same person at a later date (+1 mark)</li> <li>• reliability: use split half</li> </ul> <p><b>Marks: 1 mark</b> for basic answer. <b>1 mark</b> for elaboration/example. <b>0 marks</b> for inter-rater reliability of scores/numbers.</p>	<b>2</b>

Question	Answer	Marks
1(c)(ii)	<p><b>Suggest how the validity of the K-SAS could be assessed.</b></p> <p><b>Most likely answer</b> (other appropriate responses to be credited):</p> <ul style="list-style-type: none"> <li>• validity: concurrent validity – compared with an alternative measure (e.g. Global Assessment Functioning Scale)</li> <li>• face validity – it looks like it measures kleptomania</li> </ul> <p><b>Marks: 1 mark</b> for basic answer. <b>1 mark</b> for elaboration/example. <b>0 marks</b> for ecological validity.</p>	<b>2</b>
1(d)	<p><b>Discuss the strengths and weaknesses of using self-report questionnaires to measure kleptomania. You should include a conclusion in your answer.</b></p> <p><b>Marks:</b> Question requires <b>discussion</b>; always <b>plural</b> of each argument, and always requires conclusion. <b>1 mark</b> for each advantage/disadvantage (however detailed) <b>and</b> related to the question up to 4 max. <b>2 marks</b> max for two strengths/weaknesses unrelated to the question. <b>1 mark</b> for conclusion.</p> <p><b>Most likely answer</b> (other appropriate responses to be credited):</p> <p><b>Strengths:</b></p> <ul style="list-style-type: none"> <li>• questionnaires using quantitative data provide the therapist with useful information so they can assess the extent of the problem (1 mark). The K-SAS question can show that a person may spend over 10 hours per week thinking about stealing (+1 mark)</li> <li>• in general, asking people directly means that people are given the opportunity to express their feelings and explain their behaviour rather than the researcher trying to work out reasons for their behaviour from other methods. The K-SAS gives the therapist important information</li> <li>• relatively large numbers of participants can be done relatively easily. Questionnaires are easy to replicate</li> <li>• data can be quantitative, but may also be qualitative depending on type of question</li> </ul> <p><b>Weaknesses:</b></p> <ul style="list-style-type: none"> <li>• some participants may provide socially desirable responses; not give truthful answers; respond to demand characteristics</li> <li>• closed/fixed choice questions may force people into choosing answers that do not reflect their true opinion and therefore may lower the validity</li> <li>• researchers have to be careful about use of leading questions; it could affect the validity of the data collected</li> </ul> <p><b>Conclusion:</b> any appropriate conclusion drawn from the discussion that has been presented. 1 mark if appropriate. A conclusion is a 'decision reached by reasoning' and so a summary of points already made scores 0 marks.</p>	<b>5</b>

Question	Answer	Marks
<b>Section A: Psychology and consumer behaviour</b>		
2	<b>In a study by Milgram et al. (1986), a stooge (confederate) intruded into a line of people waiting in a queue. ‘Hey buddy, we’ve been waiting. Get off the line and go to the back!’ was one of the verbal responses to the intrusion.</b>	
2(a)	<p><b>Outline the research method used in this study.</b></p> <p><b>Most likely answers:</b></p> <ul style="list-style-type: none"> <li>• <b>Field experiment:</b> conducted in different locations in New York city. Two IVs: number of intruders (one or two), and number of buffers (zero, one, or two) yielding a complete crossing of variables by level, resulting in six experimental conditions. DVs: qualitative verbal comments and quantitative behaviours (physical actions and non-verbal behaviours).</li> <li>• <b>Observation:</b> naturalistic, covert, participant, structured (qualitative verbal comments and quantitative behaviours (physical actions and non-verbal behaviours)).</li> </ul> <p><b>Marks: 1 mark</b> for identification (2 marks if both identified). <b>1 mark</b> for elaboration/how used ‘in this study’.</p>	<b>2</b>
2(b)	<p><b>Outline <u>two</u> features of a queue, according to Milgram.</b></p> <p><b>Most likely answer:</b> Quote from study: the queue constitutes a small scale social system that possesses three distinguishing features:</p> <ul style="list-style-type: none"> <li>• it regulates the sequence in which people gain access to goods or services (first come first served)</li> <li>• the ordering (of people in a line) is given a distinctive spatial form</li> <li>• maintenance of the line depends on a shared knowledge of the standards of behaviour appropriate to this situation (i.e. people have a script for queuing)</li> </ul> <p><b>Note:</b> 0 marks for ‘length/size’; people in a line, etc. <b>Marks:</b> 1 mark for basic answer. 1 mark for elaboration/example. ×2. Any feature not above = 0.</p>	<b>4</b>
2(c)	<b>The behaviour of the people in the queue during the intrusion was observed in three response categories.</b>	
2(c)(i)	<p><b>Identify the <u>two</u> response categories used, other than verbal objections.</b></p> <p><b>Answer:</b></p> <ul style="list-style-type: none"> <li>• physical action</li> <li>• nonverbal objections</li> </ul> <p><b>Marks:</b> 1 mark for each correct identification. Allow ‘physical objections/aggression, etc.’</p>	<b>2</b>

Question	Answer	Marks
2(c)(ii)	<p><b>Give <u>one</u> example of an observed response from <u>each</u> of the two categories you have identified in (c)(i).</b></p> <p><b>Most likely answer:</b></p> <ul style="list-style-type: none"> <li>• <b>physical action.</b> laying on of hands; tugging at the sleeve; tapping the shoulder of the intruder; pushing the intruder firmly out of the line</li> <li>• <b>nonverbal objections.</b> dirty looks; hostile stares; (similar words) gestures to the intruder to get to end of the line</li> </ul> <p><b>Note:</b> no other response is creditworthy; these are the examples listed in the study. Allow similar terms, e.g. ‘disgust facially’.</p> <p><b>Marks:</b> 1 mark for each correct example. 0 marks for any example not above.</p>	<b>2</b>
2(d)	<p><b>Discuss the advantages and disadvantages of using a stooge (confederate) in studies of consumer behaviour. You should include a conclusion in your answer.</b></p> <p><b>Marks:</b> Question requires <b>discussion</b>; always <b>plural</b> of each argument, and always requires conclusion. <b>1 mark</b> for each advantage/disadvantage (however detailed) <b>and</b> related to the question up to 4 max. <b>2 marks</b> max for two strengths/weaknesses unrelated to the question. <b>1 mark</b> for conclusion.</p> <p><b>Most likely answer</b> (other appropriate responses to be credited):</p> <p><b>Strengths:</b></p> <ul style="list-style-type: none"> <li>• people behave naturally because they believe that the stooge is just another participant (1 mark). In this study the participants thought the stooge intruding into the line was another member of the public (1 mark)</li> <li>• a stooge keeps participants naïve about the nature of the study</li> <li>• a stooge may be used as a model to suggest to participants how to behave</li> <li>• use of a stooge may prevent demand characteristics</li> <li>• a stooge may standardise a procedure</li> </ul> <p><b>Weaknesses:</b></p> <ul style="list-style-type: none"> <li>• participants are deceived (no informed consent to participate in a study) and this is unethical</li> <li>• participants may not behave naturally because of the influence of the stooge</li> <li>• a stooge may bias results because of their appearance, their manner, or because of some other feature</li> <li>• the stooge may not be good at acting out an experimenters’ instructions</li> <li>• a stooge may be instructed to act in ways in which people would not normally behave</li> </ul> <p><b>Conclusion:</b> any appropriate conclusion drawn from the discussion that has been presented. 1 mark if appropriate. A conclusion is a ‘decision reached by reasoning’ and so a summary of points already made scores 0 marks.</p>	<b>5</b>

Question	Answer	Marks
<b>Section A: Stimulus question psychology and health</b>		
3	<p><b>Newspaper headline: Imagine a pleasant scene that makes you smile. According to psychologist Linda Bridge, the stress of patients suffering from breast cancer can be reduced if they are taught to imagine a pleasant scene while they are relaxing. Bridge et al. (1988) found that after six weeks of using ‘imagery plus relaxation’, patients felt much better than those who had just relaxed or those who had no stress relief intervention.</b></p>	
3(a)	<p><b>Explain what is meant by the term ‘imagery’.</b></p> <p><b>Most likely answer</b> (other appropriate responses to be credited):</p> <ul style="list-style-type: none"> <li>• an image or picture a person has in their mind (1 mark) about an object, event or particularly a scene which is pleasant, relaxing and brings happiness/a smile to the person imagining the scene (+1 mark)</li> </ul> <p><b>Marks: 1 mark</b> for basic answer e.g. identification. <b>1 mark</b> for elaboration/example.</p>	<b>2</b>
3(b)	<p><b>Outline two reasons why imagery was successful, according to Bridge et al. (1988).</b></p> <p><b>Most likely answer:</b></p> <ul style="list-style-type: none"> <li>• the simplicity of the imagery, suggesting a peaceful, pleasant scene of the patient's choice, meant that it was within everyone's grasp</li> <li>• often the image made the patient smile, at a time when smiles were perhaps few and far between</li> <li>• the pleasant scene could be recalled easily at any time, and the researchers emphasised that it was a resource which every person had within them</li> </ul> <p><b>Marks: 1 mark</b> for basic answer (apply anywhere). <b>1 mark</b> for elaboration/example (without needing help). ×2 <b>0 marks</b> Any reason not Bridge et al. <b>0 Marks</b> for describing the findings.</p>	<b>4</b>
3(c)(i)	<p><b>Explain what experimental design was used in the study by Bridge et al. (1988).</b></p> <p><b>Most likely answer:</b></p> <ul style="list-style-type: none"> <li>• The design was independent measures (1 mark) – different women did the three conditions: relaxation only, relaxation plus imagery, and control (+1 mark) – one set of patients do one condition and another set do a different condition (+1 mark)</li> </ul> <p><b>Marks: 1 mark</b> basic answer (identification), <b>2 marks</b> detailed answer/elaboration or use of example.</p>	<b>2</b>

Question	Answer	Marks
3(c)(ii)	<p><b>Outline <u>one</u> disadvantage of this design.</b></p> <p><b>Most likely answer</b> (other appropriate responses to be credited):</p> <ul style="list-style-type: none"> <li>• individual differences between participants are not controlled</li> <li>• for example: Twenty five women had received adjuvant chemotherapy at the time of or after operation before being recruited to the study. Their initial scores on the profile of mood states and Leeds general scales were compared with the scores of the 114 women who did not have adjuvant chemotherapy</li> </ul> <p><b>Marks: 1 mark</b> basic answer, <b>2 marks</b> detailed answer/elaboration or use of example.</p>	<b>2</b>
3(d)	<p><b>Discuss the evidence suggesting that using longitudinal studies to gather data on people who are ill, is useful. You should consider both sides of the argument and include a conclusion in your answer.</b></p> <p><b>Marks:</b> Question requires <b>discussion</b>; always <b>plural</b> of each argument, and always requires conclusion.  <b>1 mark</b> for each advantage/disadvantage (however detailed) <b>and</b> related to the question up to 4 max. <b>2 marks</b> max for two strengths/weaknesses unrelated to the question. <b>1 mark</b> for conclusion.  <b>Note:</b> no credit for references to individuals. Longitudinal can be many. Points can be isolated and credited.</p> <p><b>Most likely answer</b> (other appropriate responses to be credited):</p> <p><b>Advantages:</b></p> <ul style="list-style-type: none"> <li>• it determines change or stability of illness over time</li> <li>• it tracks the development of the same individual, so many factors remain constant</li> <li>• measures can be repeated and so have reliability</li> </ul> <p><b>Disadvantages:</b></p> <ul style="list-style-type: none"> <li>• attrition: participants drop out; can't be contacted</li> <li>• once a study has started the main variables cannot be changed, even though something new may be more relevant</li> <li>• unforeseen variables may occur; becoming seriously ill may change beliefs significantly as might making a full recovery</li> </ul> <p><b>Note:</b> no credit for 'timeconsuming' Question is about people who are ill, not participants in experiments.</p> <p><b>Conclusion:</b> any appropriate conclusion drawn from the discussion that has been presented. 1 mark if appropriate. A conclusion is a 'decision reached by reasoning' and so a summary of points already made scores 0 marks.</p>	<b>5</b>

Question	Answer	Marks
<b>Section A: Psychology and organisations</b>		
4	<p><b>There are five job facets in the job descriptive index (JDI) (Smith et al., 1969).</b></p> <p><b>One question from the JDI asks about the co-worker facet:</b>  <b><i>Think of the majority of people with whom you work or meet in connection with your work.</i></b>  <b><i>How well does each of the following words or phrases describe these people?</i></b></p> <p><b>__ Stimulating    __ Intelligent    __ Frustrating    __ Stubborn</b></p> <p><b><i>‘Y’ for ‘Yes’ if it describes the people with whom you work</i></b>  <b><i>‘N’ for ‘No’ if it does not describe them</i></b>  <b><i>‘?’ for ‘do not know’ if you cannot decide</i></b></p>	
4(a)	<p><b>Explain how the JDI is scored.</b></p> <p><b>Most likely answer</b> (other appropriate responses to be credited):  Each word is either positive or negative. Each item is rated using a ‘yes’, ‘no’ and ‘?’ (don’t know) scale. Positively worded items are scored 3, 1, and 0, (for Y, ?, and N) and negatively worded items are scored 0, 1, and 3). Scores obtained for each of the five dimensions.</p> <p><b>Marks: 1 mark</b> for each feature from the list above (to 2 max)</p>	<b>2</b>
4(b)	<p><b>Give two ways in which job satisfaction can be measured using questionnaires, other than the JDI.</b></p> <p><b>Most likely answer</b> (other appropriate responses to be credited):</p> <ul style="list-style-type: none"> <li>• <b>Minnesota Satisfaction Questionnaire</b> MSQ (Weiss et al., 1967) Long form: 20 aspects with 100 questions using a 5-point scale ranging from very satisfied to very dissatisfied. Short form also used</li> <li>• <b>Quality of working life</b> (QWL) questionnaire (Walton, 1974) includes 8 conditions of employment, 35 questions using a five-point scale: very dissatisfied &gt; very satisfied</li> </ul> <p><b>Marks: 1 mark</b> for identification. <b>1 mark</b> for elaboration/example. ×2.  <b>0 marks</b> for anecdotal answers.</p>	<b>4</b>

Question	Answer	Marks
4(c)	<p><b>Outline <u>two</u> job facets measured by the JDI, other than the co-worker facet.</b></p> <p><b>Most likely answers</b></p> <ul style="list-style-type: none"> <li>• <b>Pay:</b> Think of the pay you get now. How well does each of the following words or phrases describe your present pay? Words, e.g. well paid; bad</li> <li>• <b>Supervision:</b> Think of the kind of supervision that you get on your job. How well does each of the following words or phrases describe this? Words, e.g. supportive; unkind</li> <li>• <b>The work itself:</b> Think of the work you do at present. How well does each of the following words or phrases describe your work? Words, e.g. fascinating; routine</li> <li>• <b>Opportunities for promotion:</b> Think of the opportunities for promotion that you have now. How well does each of the following words or phrases describe these? Words, e.g. regular promotions; very limited</li> </ul> <p><b>Note:</b> Co-workers/people on your current job scores no marks as it is in the question stem.  <b>Note:</b> 1 mark max for answers using similar terms and serendipitously answering the question correctly, e.g. rewards/salary.  <b>Marks:</b> <b>1 mark</b> for identification. <b>1 mark</b> for elaboration/example. ×2.</p>	<b>4</b>
4(d)	<p><b>Discuss the advantages and disadvantages of measuring job satisfaction using a ‘yes/no/do not know’ scale. You should include a conclusion in your answer.</b></p> <p><b>Marks:</b> Question requires <b>discussion</b>; always <b>plural</b> of each argument, and always requires conclusion.  <b>1 mark</b> for each advantage/disadvantage (however detailed) <b>and</b> related to the question up to 4 max. <b>2 marks</b> max for two strengths/weaknesses unrelated to the question. <b>1 mark</b> for conclusion.</p> <p><b>Most likely answer</b> (other appropriate responses to be credited):  <b>Advantage:</b></p> <ul style="list-style-type: none"> <li>• clear and unambiguous way to answer. No confusing scale, no misinterpretation</li> <li>• provides quantitative data</li> <li>• results in data that can be used for statistical analysis and comparisons</li> </ul> <p><b>Disadvantage:</b></p> <ul style="list-style-type: none"> <li>• perhaps too simple – not even variants of ‘strongly’ or ‘slightly’ just yes/no/don’t know</li> <li>• no explanation for reason for answer</li> <li>• may result in ceiling effects (e.g. many ‘yesses’)</li> </ul> <p><b>Conclusion:</b> any appropriate conclusion drawn from the discussion that has been presented. 1 mark if appropriate. A conclusion is a ‘decision reached by reasoning’ and so a summary of points already made scores 0 marks.</p>	<b>5</b>

## Section B: Design Question

Question	Answer	Marks
5(a)	<p><b>Design a study using an observation to investigate whether a person has generalised anxiety disorder.</b></p> <p><b>Marks:</b> use generic levels of response Design a study question part (a).  <b>Additional:</b> Candidates should design the study showing evidence of design features appropriate to the named method. The named method: <b>observation</b>.  <b>Specific features: Observations:</b> type, setting, response categories, sampling frame, number of observers.  <b>General features of research methodology:</b> sampling technique and sample, type of data, ethics, reliability, validity, data analysis.</p>	10
5(b)	<p><b>Explain the psychological and methodological evidence on which your study is based.</b></p> <p><b>Marks:</b> use generic levels of response ‘Design a study’ question part (b).  Note: If <b>only</b> methodological or psychological explanation is provided max 5 marks  Candidates are expected to explain the reasons for the suggested design in part (a). Explanation should be both psychological and methodological.  Psychological to include appropriate theory or research.  <b>Additional:</b> candidates are expected to justify their decisions or evidence presented regarding the design made in answer to question part (a).</p> <p><b>Syllabus:</b> measures: characteristics of generalised anxiety and examples; Generalised Anxiety Disorder assessment (GAD-7)</p> <p><b>Psychological:</b></p> <ul style="list-style-type: none"> <li>• GAD is a long-term condition that causes feelings of anxiety about a wide range of situations and issues, rather than one specific event</li> <li>• people with GAD feel anxious most days and often struggle to remember the last time they felt relaxed. As soon as one anxious thought is resolved, another may appear about a different issue</li> <li>• GAD can cause both psychological (mental) and physical symptoms. These vary from person to person, but can include: feeling restless or worried, having trouble concentrating or sleeping, having dizziness or palpitations</li> </ul> <p><b>Note:</b> candidates may describe studies of anxiety such as Ost, Watson and Rayner, etc. These must be related to part (a) to receive credit.  <b>Methodological:</b> explanation of method using general and specific features as above.</p>	8

Question	Answer	Marks
6(a)	<p><b>Design a study using a questionnaire to investigate the effectiveness of the ‘disrupt-then-reframe’ sales technique.</b></p> <p><b>Marks:</b> use generic levels of response Design a study question part (a).  <b>Additional:</b> Candidates should design the study showing evidence of design features appropriate to the named method. The named method:  <b>Questionnaire.</b>  <b>Specific features: Questionnaires/Interviews:</b> type, setting, example questions. Scoring/rating scale, analysis of responses.  <b>General features of research methodology:</b> sampling technique and sample, type of data, ethics, reliability, validity, data analysis.</p>	10
6(b)	<p><b>Explain the psychological and methodological evidence on which your study is based.</b></p> <p><b>Marks:</b> use generic levels of response ‘Design a study’ question part (b).  Note: If <b>only</b> methodological or psychological explanation is provided max 5 marks  Candidates are expected to explain the reasons for the suggested design in part (a). Explanation should be both psychological and methodological.  Psychological to include appropriate theory or research.  <b>Additional:</b> candidates are expected to justify their decisions or evidence presented regarding the design made in answer to question part (a).</p> <p><b>Syllabus:</b> interpersonal influence techniques; disrupt-then-reframe (Kardes et al., 2007)</p> <p><b>Psychological:</b>  The disrupt-then-reframe (DTR) technique involves deliberately confusing consumers with a disruptive message (or confusing information) and then reframing or re-wording in a much clearer way so the consumer understands what is being said, is happy and this (i) reduces the number of counter-arguments and (ii) can close a sale.  <b>Methodological:</b> explanation of method using general and specific features as above.</p>	8

Question	Answer	Marks
7(a)	<p><b>Design an experiment to investigate the effectiveness of ‘attention diversion’ for patients during a painful medical procedure.</b></p> <p><b>Marks:</b> use generic levels of response Design a study question part (a).  <b>Additional:</b> Candidates should design the study showing evidence of design features appropriate to the named method. The named method: <b>experiment</b>.  <b>Specific features: Experiments:</b> type, IV, DV, controls, experimental design.  <b>General features of research methodology:</b> sampling technique and sample, type of data, ethics, reliability, validity, data analysis.</p>	10
7(b)	<p><b>Explain the psychological and methodological evidence on which your study is based.</b></p> <p><b>Marks:</b> use generic levels of response ‘Design a study’ question part (b).  <b>Note:</b> If <b>only</b> methodological or psychological explanation is provided max 5 marks  Candidates are expected to explain the reasons for the suggested design in part (a). Explanation should be both psychological and methodological. Psychological to include appropriate theory or research.  <b>Additional:</b> candidates are expected to justify their decisions or evidence presented regarding the design made in answer to question part (a).</p> <p><b>Syllabus:</b> psychological techniques: cognitive strategies (attention diversion, non-pain imagery and cognitive redefinition)</p> <p><b>Psychological:</b>  Attention diversion is the process of diverting the attention of a person from the source of potential discomfort thereby reducing its impact. Attention can be diverted in a number of different ways, such as simply not looking, talking about something else, watching television, listening to music, etc. Non-pain imagery could also divert attention, where person tries to alleviate discomfort by creating or imagining a mental scene that is unrelated to or incompatible with the pain. As the question involves a laboratory experiment then a candidate could use these as conditions of the IV. Note: non-pain imagery is different from attention diversion, as is cognitive redefinition.</p> <p><b>Methodological:</b> explanation of method using general and specific features as above.</p>	8

Question	Answer	Marks
8(a)	<p><b>Design a study to investigate to what extent the manager of a clothes factory demonstrates ‘levels of leadership’.</b></p> <p><b>Marks:</b> use generic levels of response Design a study question part (a).  <b>Additional:</b> Candidates should design the study showing evidence of design features appropriate to the named method. The named method: <b>any appropriate method.</b></p> <p>Typical features:</p> <ul style="list-style-type: none"> <li>• <b>Experiments:</b> type, IV, DV, controls, experimental design</li> <li>• <b>Observations:</b> type, setting, response categories, sampling frame, number of observers</li> <li>• <b>Questionnaires/Interviews:</b> type, setting, example questions. Scoring/rating scale, analysis of responses</li> </ul> <p><b>General features of research methodology:</b> sampling technique and sample, type of data, ethics, reliability, validity, data analysis.</p>	10
8(b)	<p><b>Explain the psychological and methodological evidence on which your study is based.</b></p> <p><b>Marks:</b> use generic levels of response ‘Design a study’ question part (b).  Note: If <b>only</b> methodological or psychological explanation is provided max 5 marks</p> <p>Candidates are expected to explain the reasons for the suggested design in part (a). Explanation should be both psychological and methodological. Psychological to include appropriate theory or research.  <b>Additional:</b> candidates are expected to justify their decisions or evidence presented regarding the design made in answer to question part (a).</p> <p><b>Syllabus:</b> three levels of leadership (Scouller, 2011)</p> <p><b>Psychological:</b>  Scouller (2011) outlines three levels of leadership: public, private (outer, behavioural levels) and are what a leader must do with people. Personal (an inner level) is what a leader should do to grow.</p> <p><b>Methodological:</b> explanation of method using general and specific features as above.</p>	8

## Section C: Evaluation Question

Question	Answer	Marks
9	<p><b><i>‘All impulse control disorders are caused by a person receiving positive reinforcement after engaging in a particular behaviour.’</i></b></p> <p><b>To what extent do you agree with this statement? Use examples of research you have studied to support your answer.</b></p> <p><b>Marks:</b> use generic levels of response in table C.  <b>Syllabus:</b> causes of impulse control disorders and non-substance addictive disorder; behavioural: positive reinforcement.</p> <p><b>Most likely</b> (any other appropriate responses should be credited):  <b>For:</b></p> <ul style="list-style-type: none"> <li>• the behavioural explanation of learning has repeatedly shown that behaviour is strongly influenced by its antecedents</li> <li>• positive reinforcement is the basis of explanations of ICDs such as that by Miller (feeling-states)</li> <li>• this approach explains other abnormalities such as fears and phobias, and there are successful treatments based on these principles</li> </ul> <p><b>Against:</b></p> <ul style="list-style-type: none"> <li>• cognitive explanations show that not all people respond in the same way to positive reinforcement (positive punishment can be rewarding for some people, such as attention seekers)</li> <li>• biomedical explanations would also suggest that behaviour is determined by dopamine, serotonin, etc.</li> <li>• Freud would suggest that ICDs are the result of defence mechanisms, etc.</li> </ul>	12

Question	Answer	Marks
10	<p><b><i>‘Descriptive food names do not influence perception of food; people will eat what they like.’</i></b></p> <p><b>To what extent do you agree with this statement? Use examples of research you have studied to support your answer.</b></p> <p><b>Marks:</b> use generic levels of response in table C.  <b>Syllabus:</b> menu design psychology: sensory perception and food name (Wansink et al., 2005)</p> <p><b>Most likely</b> (any other appropriate responses should be credited):  <b>For:</b></p> <ul style="list-style-type: none"> <li>• quote from Wansink: those who ate foods with evocative, descriptive menu names generated a larger number of (i) positive comments about the food and (ii) rated it as more appealing, tasty, and calorific than those eating regularly-named counterparts</li> <li>• the use of descriptive names may help improve perceptions of foods in institutional settings, and it may help facilitate the introduction of unfamiliar foods</li> <li>• descriptive names are designed to make the food sound more tasty, appealing and may refer to the quality of the food, or where it is from (e.g. ‘locally sourced’)</li> </ul> <p><b>Against:</b></p> <ul style="list-style-type: none"> <li>• descriptions may create an expectation that is not met when the food arrives making the customer disappointed</li> <li>• people choose to eat what they like and do not choose what they dislike. The name is irrelevant</li> <li>• people do not like food descriptions which are too descriptive; restaurants try to make something average sound good that is not</li> </ul>	12
